The University will be implementing the next step in using @arizona.edu for UAConnect365 email addresses. With this step, no action is required.

**Beginning Tuesday, March 10, 2020**, all faculty, staff, emeritus, DCC, and student worker (Catworks) accounts will SEND AS `<NetID>@arizona.edu`. This change does not affect student email (CatMail), or retirees in UAConnect365.

Email will continue to be RECEIVED at both @email.arizona.edu and @arizona.edu addresses. New hires will get the arizona.edu address, but will also be able to receive email sent to email.arizona.edu.

**FOR EXAMPLE**

When Wilbur Wildcat, with NetID *wilbur*, sends email, the "From" address will show [wilbur@arizona.edu](mailto:wilbur@arizona.edu) [1]. Others may have had his "old" email address, [wilbur@email.arizona.edu](mailto:wilbur@email.arizona.edu) [2]. Wilbur's inbox will receive email sent to either [wilbur@arizona.edu](mailto:wilbur@arizona.edu) [1] or [wilbur@email.arizona.edu](mailto:wilbur@email.arizona.edu) [2].

This change should not affect anyone with customizations applied (e.g., @tla.arizona.edu).

**LOGINS**

UA services (e.g., Office 365, Adobe, Box, etc.) that use your @email.arizona.edu address to log in will continue to use your @email.arizona.edu address.

**@ARIZONA.EDU PROJECT**

Adopting @arizona.edu as the primary email address for doing business at the University has been made in response to the [UAVoice request](https://uaatwork.arizona.edu) [3] and many others who have supported this option for a simplified branding and email experience.

**OTHER EMAIL ENHANCEMENTS COMING SOON**

The following changes will apply to all centrally managed University email accounts (UAConnect365 and CatMail).

**External Sender Notification**: The University is planning to add a banner to messages that
come from outside Arizona email systems. This will help flag scam emails that purport to be from campus leaders or other members of the University.

**DMARC:** The University will implement a monitoring phase of DMARC (Domain-based Message Authentication, Reporting & Conformance) [4], an email authentication security measure, on outgoing email. In the monitoring phase, there will be no impact on emails you send.
