Alternative Treatment for Major Depressive Disorder Research Study

Date::
September 18, 2013

The University of Arizona is looking for participants for a research study on the effects of an alternative procedure on Major Depressive Disorder. Participants will experience different levels of whole-body infrared heating (Whole Body Hyperthermia, or WBH). This study will examine WBH's effects on your depression, how you relate to other people in your environment and how you spend your time in general.

ELIGIBILITY

- 18-65 years old
- Medically healthy
- Currently experiencing Major Depression for at least four weeks
- Not currently taking any antidepressant medications

You will receive compensation for your time.

You can find more information at [mddstudy.org](http://mddstudy.org).

Researcher: The researcher on this study is Charles Raison and the study title is "Whole Body Hyperthermia and Major Depression (MDD)."

An Institutional Review Board responsible for human subjects research at the University of Arizona reviewed this research project and found it to be acceptable, according to applicable state and federal regulations and University policies.
