How to Get the Most Out of Your Own Software Solutions

Date:
March 27, 2018

Have you and your team members created new software solutions in the course of your work? Have you developed custom solutions for vexing problems? Applications for modeling and visualizing data? New algorithms for analyzing information?

Is there a chance that others could benefit from the software that you’ve developed?

If you answered "yes" to any of these questions, this may be an opportunity that Tech Launch Arizona can help you turn into revenue.

TLA can help you evaluate the potential of your solutions and set up strategies to make them available to others, not only increasing the impact of your work, but also potentially creating a revenue stream.

Discussions are completely confidential. Your ideas are protected. We help you fulfill potential reporting requirements.

Contact Tech Launch Arizona to discuss the potential for your application:

- **Lewis Humphreys** [1], Licensing Manager for Software & IT, lewish@tla.arizona.edu [2], 520-626-1213
- **John Geikler** [3], Assistant Director for Physical Sciences Licensing, johng@tla.arizona.edu [4], 520-626-4605

Can't quite visualize how this might happen? Check out this story [5] of a UA team that recently commercialized an algorithm they developed for natural language processing. Or this story [6] of a UA team that commercialized a solution they developed to help UA students discover available scholarships.

We look forward to hearing from you.

Sincerely,

The Tech Launch Arizona Team
